Art Unit 212

There being no amendment to the claims, claims 130-135 are rejected under 35 USC 112, second paragraph for the reasons stated on pages 2-4 of the last Office action.

Similarly, claims 130, 134 and 135 are rejected under 35 USC 103 for the reasons stated on pages 4 and 5 of the last Office action.

Applicant's arguments filed April, 3, 1986 have been fully considered but they are not deemed to be persuasive.

At the outset, it is noted applicant has offered to amend claim 130 without actually doing so (Remarks, page 5). The Office considers the claims as they are, not as they might be amended, and thus the hypothetical amendment will not be further considered.

As to the Remarks, page 4, para. (a), the AC output terminals are interpreted to mean the inverter output terminals across which a trapezoidal wave appears. It is appropriate to note here a common problem with applicant's claims giving rise to this type of confusion, namely, that claim 130 as well as the remaining claims are simply incomplete, failing to recite sufficient meaningful structure and interrelationships between the structure to "particularly point ^{out} ~~are~~ and distinctly claim" the invention, including a relationship between AC output terminals and the inverter.

Art Unit 212

As to the issue of trapezoidal waveforms (pages 4 and 5), applicant himself has earlier claimed a trapezoidal waveshape, see for example claim 122. The loose, use of squarewave voltage and trapezoidal waveform in the same case remains confusing.

As to page 5, paragraph c, connecting an LC circuit to a node does not make a complete circuit.

As to page 5, paragraph d, claims are given their broadest reasonable consideration in prosecution before the Office, and it is believed that the examiner's interpretation is reasonable.

As to page 9 and the motivation issue, it would have been obvious to use a voltage multiplier/full wave rectifier arrangement feeding an inverter for use with diverse input voltage sources, as in Rhoads. Any connection to ground as a result of this expedient follows naturally and thus obviously from the use of such a well known input rectifier/multiplier arrangement.

Lastly, as to the argument about non-analogous art (page 10), it suffices to say that the three references are all classified in Class 363, the conversion art, and that one skilled in the conversion art would be expected to know their content, their teachings and their suggestions.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a). The practice of automatically extending the shortened statutory period an additional month upon the filing of a timely first response to a final rejection has been discontinued by the Office. See 1021 TMOG 35.
